Subject: Request for a Rulemaking Hearing concerning 6 CCR 1011-1, Standards for Hospitals and Health Facilities, Chapter 9 - Community Clinics and new Chapter 13 -Freestanding Emergency Departments, and conforming amendments, 6 CCR 1015-4, Statewide Emergency Medical and Trauma Care System, Chapters Two and Three

The Department is requesting consideration of several sets of rules in the attached package.

Chapter 13 - Freestanding Emergency Departments is a new chapter added to 6 CCR 1011-1, Standards for Hospitals and Health Facilities. These new rules are the result of HB19-1010, a legislative mandate to create a new licensure category for Freestanding Emergency Departments (FSEDs). These facilities are currently licensed as Community Clinics but the new legislation dictates that these facilities must be re-licensed as FSEDs no later than June 30, 2022. Since licensure is annual, and because there is a statutory mandate, the Department is requesting that the rules be effective July 1, 2021, which is when existing clinics may begin the transition process to become FSEDs.

While these facilities are licensed as Community Clinics, that licensure category never really "fit" the business model. The passage of HB 19-1010 allows the department to better align the requirements for FSEDs with the requirements for hospital-based emergency departments. Approximately 40 of the 45 facilities currently licensed as Community Clinics and Emergency Centers will be required to convert to the new FSED licensure category.

In addition, Chapter 9 - Community Clinics and Community Clinics and Emergency Centers is being extensively revised. Much of the content is similar to the current Chapter 9. However, the language is updated, and the chapter is restructured for ease of use. Chapters 9 and 13 use identical or similar language where the regulatory requirements are comparable.

Finally, the proposed rules incorporate non-substantive revisions to certain existing rule sections in the trauma rules, 6 CCR 1015-4, Statewide Emergency Medical and Trauma Care System, Chapters Two and Three (The Trauma Registry and Designation of Trauma Facilities). In these chapters, current references to "Community Clinics and Emergency Centers" must be changed to include the newly re-licensed FSEDs, as they are also regulated for the purpose of trauma. (Please note that all references to these non-substantive revisions will be indicated with ** in the attached document.)

The Department is requesting a July 1, 2021 effective date for all of the proposed rule changes included in this hearing.

Basis and Purpose.

In HB19-1010, the legislature directed the Department to create a new health facility licensure category for Freestanding Emergency Departments (FSEDs). These facilities are currently licensed as Community Clinics along with several other types of facilities, some of which provide emergency services and some of which do not. The legislation requires that all facilities eligible for this new licensure type must convert to an FSED license no later than June 30, 2022.

In addition, the legislation requires that the Board of Health adopt rules to take effect July 1, 2021, to guide the conversion process. The result will be approximately 40 +/- facilities transitioning to the new license type (FSED), while about five facilities will remain licensed Community Clinics, as permitted in statute. It is important to note that this count was completed prior to the COVID-19 pandemic during which some FSEDs closed to allow hospital systems to focus efforts on understaffed hospital emergency departments. It is unknown how many of the temporarily closed locations will re-open once the pandemic is over.

As a result of the legislative mandate, the major rule changes being submitted to the Board of Health will:

- 1) Create licensure requirements for the new FSED licensure category, and
- 2) Revise and clarify the requirements for the remaining Community Clinics.

These rules will be housed in 6 CCR 1011-1, Chapter 9 - Community Clinics, and the new Chapter 13 - Freestanding Emergency Departments. Please note: Chapter 9 looks like all new language as indicated by the red, small cap font; however, more than half of the language is original as indicated by comments in the margins.

Conforming amendments are also required in Chapter 2 - General Licensure Standards in order to integrate FSEDs into the general licensing requirements. Chapter 2 also has conforming amendments due to another new set of rules being submitted to the Board of Health concurrently (Chapter 3 - Behavioral Health Entities), and thus all amendments to Chapter 2 will be covered in a separate packet.

Chapter 13 also contains new rules permitted by the passage of SB18-146. These rules simply point FSEDs to notification/signage language requirements that must be presented to patients and posted in conspicuous locations. SB18-146 contained permissive, not mandatory, rulemaking authority; and since this is the initial rulemaking for FSED licensure, this is the first opportunity to create these rules.

**Finally, these proposed rules incorporate non-substantive revisions to certain sections in 6 CCR 1015-4, Statewide Emergency Medical and Trauma Care System. The trauma rules are

implicated in this rulemaking because Section 25-3.5-704(2)(d), C.R.S., requires every licensed facility “that receives ambulance patients” to participate in Colorado’s trauma care system as either a designated or nondesignated trauma facility. The proposed rules impose that requirement on licensed FSEDs and Community Clinics that provide emergency services, two facility types that receive ambulance patients. Therefore, the proposed trauma rules incorporate non-substantive conforming amendments in two respects.

First, the trauma rules have been revised to define and reference “Community Clinics providing emergency services (CCs),” and to delete all trauma rule references to Community Clinic Emergency Centers (CCECs). These revisions are necessary because the trauma rules inaccurately refer to the term “community clinic and emergency centers,” which is not adopted in the statute authorizing rulemaking. The proposed rules therefore delete those references and define and incorporate accurate terminology concerning the one category of licensed Community Clinics that is material to the trauma rules: a Community Clinic licensed under Section 25-3-101(2)(a)(I), C.R.S., which is defined as a health facility that “(B) provides emergency services at the facility ...”

Second, the trauma rules have been amended to reference the “Freestanding Emergency Department” licensure category that was enacted in SB18-146 and amended in HB 19-1010. See Section 25-1.5-114, C.R.S.; see *also* Section 25-3-101(2)(a)(I)(B), C.R.S. Consequently, conforming amendments have been made to the trauma rule sections that should refer or relate to this new licensure category.

The Department is requesting an effective date of July 1, 2020 for all of the proposed changes.

1. A description of the classes of persons affected by the proposed rule, including the classes that will bear the costs and the classes that will benefit from the proposed rule.

Group of Persons/Entities Affected by the Proposed Rule	Size of the Group	Relationship to the Proposed Rule Select category: C/CLG/S/B
Community Clinics Providing Emergency Services that will be required to become licensed as Freestanding Emergency Departments (FSEDs) no later than June 30, 2022	40 +/-	C
Community Clinics	1	C
Department of Corrections Community Clinics	22	C
Community Clinics Providing Emergency Services that meet the grandfathering clause and will remain Community Clinics	5	C
Healthcare Systems, Healthcare Management Companies, and Healthcare Associations such as the Colorado Hospital Association	Multiple	C/S
Clients receiving services at licensed facilities	Unknown	B

While all are stakeholders, groups of persons/entities connect to the rule and the problem being solved by the rule in different ways. To better understand those different relationships, please use this relationship categorization key:

- C = individuals/entities that implement or apply the rule.
- S = individuals/entities that do not implement or apply the rule but are interested in others applying the rule.
- B = the individuals that are ultimately served, including the customers of our customers. These individuals may benefit, be harmed by, or be at-risk because of the standard communicated in the rule or the manner in which the rule is implemented.

**The Division anticipates that the proposed conforming amendments to the trauma rules will not affect any class of persons.

2. To the extent practicable, a description of the probable quantitative and qualitative impact of the proposed rule, economic or otherwise, upon affected classes of persons.

Economic outcomes

Summarize the financial costs and benefits, include a description of costs that must be incurred, costs that may be incurred, any Department measures taken to reduce or eliminate these costs, any financial benefits.

C: The only facility type that will experience any fiscal impact will be those facilities currently licensed as Community Clinics that are required to convert to FSED licensing by June 30, 2022. There will be no change in economic impact to Community Clinics providing outpatient services, Community Clinics within the Colorado Department of Corrections, and Community Clinics providing emergency services that meet the definition in Section 25-1.5-114, C.R.S. (Those that were licensed as community clinics prior to July 1, 2010, and are located in rural or ski areas.)

The change in fees for newly licensed FSEDs is exactly as proposed in the fiscal note submitted during the legislative process. These fees are based on the actual costs of current on-site surveys plus anticipated costs of extra survey work required to verify compliance with additional FSED standards. The table below represents the current fees for Community Clinics providing emergency services and the new fees that these facilities will be required to pay.

The economic impact on facilities newly licensed as FSEDs, beginning July 1, 2021, is as follows:

License Category	Initial license	Renewal license	Change of ownership
Current Fees for Community Clinic Providing Emergency Services	\$2,873.89	\$1,410.82	\$3,239.65
New FSED Fees, beginning July 1,2021	\$6,150.00	\$3,400.00	\$3,300.00

S: There will only be an economic impact to entities in this group.

B: There should be little, if any, fiscal impact for those using the services of the newly licensed FSEDs. These facilities have always charged prices comparable to hospital-based emergency departments, and the increased annual licensure fee should not be a major driver of any cost increases.

In addition, the requirement to provide disclosures to patients of FSEDs has existed since the adoption of SB18-146 in 2018. So while the rules are new, the requirements are not, and thus should have no impact, positive or negative, on the cost of care provided to consumers.

**The proposed revisions to the trauma rules will not result in any qualitative impact to affected classes of persons. The proposed conforming amendments clarify that Community Clinics providing emergency services and FSEDs are two licensed facility types that must participate in the trauma system as designated or nondesignated facilities. Therefore, because the proposed amendments do not alter the substance of the trauma rules, no affected class of persons will incur new expenses or financially benefit from the conforming provisions.

Non-economic outcomes

Summarize the anticipated favorable and non-favorable non-economic outcomes (short-term and long-term), and, if known, the likelihood of the outcomes for each affected class of persons by the relationship category.

C: New and revised definitions should create improved clarity for the regulated community. Inclusion of references to national best practice guidelines also provides for the provision of up-to-date care while improving the flexibility of the rules based on the constant changes in current medical practice.

Each facility regulated under Chapter 9, Community Clinics will be required to have an explicit scope of care, providing better clarity for the facility and patients alike with regard to what services will be offered.

Each FSED regulated under Chapter 13 will have more explicit requirements regarding the required scope of emergency services, better aligning the scope with hospital-based emergency departments.

C and B: In both chapters, patients will benefit from the new regulations in that numerous rules have been rewritten to stress what resources are necessary to ensure the safe care of the patient. In addition, the proposed rules encourage rapid and appropriate transfer of patients, after stabilization, if the facility does not have the resources to meet all patient needs.

**The conforming trauma rule amendments will not result in any non-economic impacts. They merely clarify that the same entities that were subject to the trauma designation rules remain subject to those same rules, despite their new nomenclature.

3. The probable costs to the agency and to any other agency of the implementation and enforcement of the proposed rule and any anticipated effect on state revenues.

A. Anticipated CDPHE personal services, operating costs, or other expenditures:

The Department expects that expenditures for implementing the FSED license process will be somewhat higher than the expenditures to support facilities currently licensed as Community Clinics providing emergency services. The new and more detailed requirements for the FSEDs will result in the following additional costs:

- One-time costs associated with an onsite inspection of each facility converting services to an FSED. This conversion process will require each facility to undergo an "initial" licensure inspection to ensure that it meets the new standards as described in Chapter 13.
- One-time costs associated with providing outreach to facilities required to convert to the new licensure type and education to those facilities regarding new standards and how those standards will be measured.
- One-time costs associated with revising the onsite inspection processes to assess regulatory compliance with new standards.
- Ongoing costs associated with additional staff hours required to assess compliance with additional standards.
- One-time costs associated with the addition of a new licensure type to the current process of licensure issuance including costs associated with potential software changes.

- One-time and ongoing costs associated with training staff on new licensure category requirements.

Anticipated CDPHE Revenues:

Staff calculated expected revenues based on the 40 +/- facilities currently licensed as Community Clinics providing emergency services that will transition to an FSED license. The expected net revenue gain in the first year is roughly \$189,567 (due to the "initial" fee being charged for each FSED conversion). After the first year, the move from "initial" license fees to the lower "renewal" license fees is expected to decrease the net revenue gain to roughly \$79,567 above current revenues.

**Implementation or enforcement of the conforming amendments in the trauma rules will not impose any additional costs, or result in any additional revenue, to the Department or any other agency.

- B. Anticipated personal services, operating costs, or other expenditures by another state agency:

Anticipated revenues/expenditures for another state agency: N/A

4. A comparison of the probable costs and benefits of the proposed rule to the probable costs and benefits of inaction.

Rulemaking is required by HB19-1010; thus inaction is not an option.

The Department's goal is to provide the regulated community a set of standards that are simple, clear, and not redundant. This rule revision significantly clarifies the requirements while reducing redundancy. Furthermore, by allowing each facility to (within certain parameters) define its scope of care, the rules provide freedom to facilities that have additional resources while protecting the minimum standards upon which all facilities are measured.

**N/A to the conforming amendments to the trauma rules.

Along with the costs and benefits discussed above, the proposed revisions:

- Comply with a statutory mandate to promulgate rules.
 Comply with federal or state statutory mandates, federal or state regulations, and department funding obligations.
 Maintain alignment with other states or national standards.
 Implement a Regulatory Efficiency Review (rule review) result
 Improve public and environmental health practice.
 Implement stakeholder feedback.
 Advance the following CDPHE Strategic Plan priorities:

<p>Goal 1, Implement public health and environmental priorities Goal 2, Increase Efficiency, Effectiveness and Elegance Goal 3, Improve Employee Engagement Goal 4, Promote health equity and environmental justice Goal 5, Prepare and respond to emerging issues, and</p>

Comply with statutory mandates and funding obligations
--

Strategies to support these goals:

- Substance Abuse (Goal 1)
 - Mental Health (Goal 1, 2, 3 and 4)
 - Obesity (Goal 1)
 - Immunization (Goal 1)
 - Air Quality (Goal 1)
 - Water Quality (Goal 1)
 - Data collection and dissemination (Goal 1, 2, 3, 4, 5)
 - Implement quality improvement/a quality improvement project (Goal 1, 2, 3, 5)
 - Employee Engagement (Goal 1, 2, 3)
 - Decisions incorporate health equity and environmental justice (Goal 1, 3, 4)
 - Detect, prepare and respond to emerging issues (Goal 1, 2, 3, 4, 5)
- Advance CDPHE Division-level strategic priorities.

The costs and benefits of the proposed rule will not be incurred if inaction was chosen. Costs and benefits of inaction not previously discussed include:

N/A

5. A determination of whether there are less costly methods or less intrusive methods for achieving the purpose of the proposed rule.

Section 25-1.5-103, C.R.S., requires the Board of Health to promulgate rules providing minimum standards for the operation of FSEDs. Less costly or less intrusive methods do not fulfill this requirement. The new chapter proposed in this rulemaking was developed in conjunction with the facilities currently licensed under Chapter 9, Community Clinics and other stakeholders to provide consistent, appropriate regulations to achieve the maximum benefit at the minimum cost. Rules were consistently evaluated regarding whether they were the minimum necessary to fulfill the intent of, and achieve compliance with, HB19-1010 and to protect the health, safety, and welfare of individuals seeking services at FSEDs.

6. Alternative Rules or Alternatives to Rulemaking Considered and Why Rejected.

Rulemaking was required per statute to create a new health facility licensure category for FSEDs. The rules were drafted based on review of the statute, rules for similar facility types, and rules from other states. A work group, including members of the regulated community, participated in monthly work sessions and considered many alternative proposals for individual rules. They selected those elements that were deemed critical to public health and safety.

The consensus rules presented here were written with the goal of providing safe and appropriate care while minimizing regulation. Applicable regulations from other rule sets are cross-referenced rather than repeated to reduce duplication. The group also worked to modernize those areas of Chapter 9 that had somewhat dated language.

**Alternative trauma rules were not considered because the changes are non-substantive and simply update the appropriate facility nomenclature.

7. To the extent practicable, a quantification of the data used in the analysis; the analysis must take into account both short-term and long-term consequences.

The Department and work group did not utilize numerical data other than the numbers of affected facilities. Rather, they relied heavily on the expertise and experience of work group members as well as upon information and opinions provided by professional organizations when developing the proposed rules. The national organizations and resources include:

- Recommendations and practice guidelines published by the American College of Emergency Physicians (<https://www.acep.org/>);
- Recommendations and standards published by the American College of Surgeons; Committee on Trauma (<https://www.facs.org/quality-programs/trauma/tqp/center-programs/vrc>);
- Regulations from other states;
- Research in Colorado statutes to align all uses of similar terms with regard to licensure categories; and
- 42 C.F.R. § 482 (Federal Conditions of Participation).

In order to ensure that the Department received the broadest amount of expertise and experience, staff reached out to affected facilities, some of which were not able to attend work group meetings, to ensure that those facilities had the opportunity to attend meetings or provide written feedback.

**N/A to the conforming amendments to the trauma rules.

Stakeholder Group Notification

The stakeholder group was provided notice of the rulemaking hearing and provided a copy of the proposed rules or the internet location where the rules may be viewed. Notice was provided prior to the date the notice of rulemaking was published in the Colorado Register (typically, the 10th of the month following the Request for Rulemaking).

Not applicable. This is a Request for Rulemaking Packet. Notification will occur if the Board of Health sets this matter for rulemaking.

Yes.

Summarize Major Factual and Policy Issues Encountered and the Stakeholder Feedback Received. If there is a lack of consensus regarding the proposed rule, please also identify the

Department’s efforts to address stakeholder feedback or why the Department was unable to accommodate the request.

No major factual or policy issues were encountered. There were discussions around many details in the rules; however, stakeholders were not opposed to any major concept since these are modifications of regulations that they already meet. In all cases where there was dissent about any detail of the proposed rule set, group discussion led to revised language that the group could gain consensus on. In some cases, staff was directed to do additional research and come back to the group with information that helped to clarify where there was consensus or where there were changes needed to achieve agreement.

Please identify the determinants of health or other health equity and environmental justice considerations, values or outcomes related to this rulemaking.

This rulemaking creates more appropriate standards for Freestanding Emergency Departments (FSEDs) by seeking to align the FSED standards with hospital emergency department standards. Thus, when people seek emergency care at an “emergency department,” whether located within or outside the walls of a hospital, they should experience a consistent level of care.

In addition, by putting FSEDs in their own licensing category, and then updating the current licensing category to more accurately reflect Community Clinics providing emergency care, populations that are served by these Community Clinics will have standards that better protect their health, safety, and welfare while reflecting the rural nature of the remaining Community Clinics providing emergency services.

GOVERNOR OF THE STATE OF COLORADO

An Act

SENATE BILL 18-146

BY SENATOR(S) Kefalas and Smallwood, Martinez Humenik, Aguilar, Coram, Crowder, Donovan, Garcia, Gardner, Jahn, Moreno, Tate, Todd, Williams A., Guzman, Jones, Kagah, Kerr, Lambert, Lundberg, Merrifield, Neville T.;

also REPRESENTATIVE(S) Sias and Singer, Hansen, Kennedy, Arndt, Becker K., Bridges, Buckner, Coleman, Esgar, Exum, Garnett, Ginal, Hamner, Herod, Hooton, Lee, Lontine, Melton, Michaelson Jenet, Pettersen, Roberts, Rosenthal, Saine, Valdez, Weissman, Winter, Young, Duran.

CONCERNING A REQUIREMENT THAT A FREESTANDING EMERGENCY DEPARTMENT INFORM A PERSON WHO IS SEEKING MEDICAL TREATMENT ABOUT THE HEALTH CARE OPTIONS THAT ARE AVAILABLE TO THE PERSON, AND, IN CONNECTION THEREWITH, MAKING AN APPROPRIATION.

Be it enacted by the General Assembly of the State of Colorado:

SECTION 1. Legislative declaration. (1) The general assembly hereby finds and declares that:

(a) Colorado struggles to control the cost of health care, which is consistent with national trends;

Capital letters or bold & italic numbers indicate new material added to existing statutes; dashes through words indicate deletions from existing statutes and such material not part of act.

(b) The cost of health care benefits, including health insurance policies and monthly premiums, is directly related to the costs of health care services, products, and medications used by Colorado residents to maintain their health, whether addressing acute health needs or managing chronic health conditions;

(c) The costs of receiving health care services for treating a specific condition vary significantly based on the setting or facility at which the health care services are delivered to the patient;

(d) Emergency departments, including freestanding emergency departments, which are often referred to as "FSEDs", have been widely recognized as the most expensive setting for receiving nonemergency health care services, and evidence shows that utilization of FSEDs for nonemergency health care services significantly drives up health care costs for Colorado residents;

(e) Data from the all payer claims database indicate that seven of the top ten reasons for visiting a FSED were for nonemergency services;

(f) FSEDs have proliferated, primarily along the Front Range, with thirty-seven FSEDs in operation in 2016, and Colorado is one of the top three states in terms of the number of FSEDs operating in the state;

(g) Colorado health care providers, facilities, and insurers have a shared responsibility to inform and educate Colorado health care consumers regarding their health care options and costs associated with those options so that consumers can make informed health care decisions regarding where they choose to receive their health care, what the costs will be, and the costs for which they will be responsible;

(h) While initially introduced in Colorado as facilities necessary to address critical health care coverage gaps existing across diverse geographic regions, particularly rural regions, FSEDs are increasingly located in more suburban and urban areas with adequate access to health care facilities;

(i) Significant differences also exist in terms of the costs patients incur for receiving nonemergency health care services at FSEDs compared to receiving similar care at urgent care centers or a primary care physician's

office;

(j) FSED facility fees significantly increase patients' costs compared to costs associated with receiving nonemergency care at an urgent care center or primary care physician's office;

(k) The price of hospital facility fees rose eighty-nine percent between 2009 and 2015, twice as much as the price of outpatient health care and four times as much as overall health care spending; and

(l) The intent of this bill is to:

(I) Require transparency and disclosure to consumers by FSEDs or off-campus emergency departments for the purpose of helping health care consumers make informed decisions; and

(II) Authorize the Colorado department of public health and environment to oversee and enforce a comprehensive set of consumer protections through the implementation of transparency and disclosure measures.

SECTION 2. In Colorado Revised Statutes, add 25-3-119 as follows:

25-3-119. Freestanding emergency departments - required notices - disclosures - rules - definitions. (1) (a) (I) A FREESTANDING EMERGENCY DEPARTMENT SHALL GIVE TO EVERY INDIVIDUAL SEEKING TREATMENT AT THE FACILITY A WRITTEN NOTICE CONTAINING THE FOLLOWING STATEMENTS IMMEDIATELY UPON REGISTRATION:
