How to commit voter fraud.

1. Have your agent assume the identity of an individual you know is not going to vote. Dead people show up to vote exactly 0% of the time. Make it difficult to remove individuals from voter rolls that are confirmed dead so an illegal ballot can be submitted using their identity.
2. ID and signature verification could thwart an identity theft fraudulent ballot. Make verification completely subjective to eliminate this identity theft countermeasure.
3. Citizen poll watchers will observe and report this blatant subversion of the democratic process. Throw away the first amendment and silence them under penalty of persecution.
4. As the old Soviet Communists used to say, "it isn't who votes, but who counts the votes that matter". Protect the ability to manipulate electronic voting machines for fraud.
   1. Make administrative access and manipulation anonymous. Can't have our loyal foot soldiers being sentenced to prison.
   2. Reduce electronic security measures. If we can't submit a paper fraud ballot, just submit an electronic fraud ballot.
   3. Eliminate the troublesome chain of custody obstacle. This will enable the wholesale replacement of an untampered piece of equipment with a doctored fraud piece of equipment with nobody being able to trace the switch.

This is how professionals commit vote fraud on an industrial scale to thwart our democracy and impose corrupt tyranny. The Secretary of State is advocating for EVERY… SINGLE… ONE! Her rulemaking not only needs to be rejected in its entirety, but she needs to be relieved of all duties while a civil rights and voter disenfranchisement investigation takes place.
